The iPinium story

It all started in the beginning of 2000. Idea behind establishment was to find innovative solutions inside the Food Processing Industry (FPI). The company has been involved in several projects, the most significant was Tina thawing cabinet (patented). This was launched 2001.

Referring to our patented composite iPinium undersigned was travelling in south of Germany. During a visit to a factory producing professional galley products, presentation was made on a grill grid that during demonstration showed interesting results. Visit ended in several discussions how to find a way to take the product through industrial process: production, coating, certifications, legislations etc to the market.

Due to several other topics the “real” start of the process did not start until mid 2004 and began with the grillgrid were we found production method and quality issues solved. However the main obstacle during grilling and frying process the surface was an issue not giving the optimal solution.

Parallel we started to search for the plate where to maintain the same content as our grill grid.

Result ended finally in a plate and after lab tests to be produced in 2 mm. Along the road we have invested in tooling giving us today possibilities producing main GN standards such as 1/1, 2/3, 1/2, 1/3 in various depths (20, 40 and 60 mm).

Additional grill grid solution was also constructed ending in a Grill/Fry/Bake product where we grill on one side and fry or bake on the other. PotatoeBaker and Multifryer is additional products in the iPinium family.

Process has tested main possibilities on coating such as anodization, silicone, nano. Since last 4 years we have worked close in partnership with Whitford, world leading on coating for the FPI sector and have refined the process year by year. Finally ending up in coating by today ETERNA, an outstanding product in the PTFE family. The coating applied in a fully automatic painting process giving us an excellent result. The coating allows either hand washing or dishwashing machine.
